Calculating Parish and City Taxes

The first \$75,000 of value on a primary residence is exempt from parish taxes. For example, if the assessed value is \$125,000, the parish millage would apply to \$50,000 (\$125,000 - \$75,000). The result is divided by 1,000 for a taxable value of 5000 (50,000 x .1). The Parish millage of .15975 X \$5,000 non-exempt value results in a parish tax of \$798.75.

The homestead exemption does not apply to city taxes. The city millage would apply to the entire \$125,000 (divided by 1,000); ie \$12,500 x .01729 = \$216.12. Total property taxes would be \$798.75 + 216.12 = \$1,014.87.
